PUBLICATION DATE: JANUARY, 2008

INTRODUCTION

In recent years there have been two separate reports (Annual Statistical Report for Area Programs and the Admissions Report for Area Programs) that have provided descriptive statistics and trends in the public community mental health system in North Carolina. In an effort to provide a single source of information that adequately describes the type of clients served at the clinical, demographic and geographic level these two reports have been combined into a single report for State Fiscal Year 2007. While similar in format and table construction to the previous reports, the intent of this report is to provide an integrated look at major service indicators and measures.

FIGURE 1

**SELECTED INDICATORS AND PERCENT CHANGE OVER TIME
STATE TOTALS, FISCAL YEAR 2007, 2002, 1997**

INDICATORS	FISCAL YEAR			PERCENT CHANGE FY07 vs. FY02
	FY07	FY02	FY97	
Active Caseload Start of Fiscal Year	236,749	229,265	170,188	3.3%
Total Admissions	78,589	87,857	106,855	-10.5%
Total Terminations	74,790	86,607	77,793	-13.6%
Active Caseload End of Fiscal Year	240,548	230,515	199,250	4.4%
Persons Served	315,338	317,122	277,043	-0.6%

Note: Persons Served data for FY07 excludes clients on inactive status

There is a noticeable decrease in the admission indicators when comparing fiscal year 2007 and fiscal year 2002 data. This is primarily due to comparing IPRS and Medicaid paid claims with the admissions to the Client Data Warehouse.

TABLE I

Client Activity and Utilization (Table I) reflects admission rates, active caseload at the beginning of the fiscal year, total admissions and the total number of persons served by area and region. There were 236,749 active cases on July 1, 2006 and 78,589 total admissions (first and readmissions combined) during the fiscal year. A total of 315,338 persons were served during fiscal year 2007 as indicated by adding first and readmissions to the active cases (excluding those on Inactive Status) on July 1, 2006. Graph 1 depicts the number of clients served at the Area Programs for the last ten years. There has been a consistent increase during the ten-year period, with the exception of FY00, FY02, FY03, FY06, and FY07.

Admission rates reflect the total number of admissions to an area program during the fiscal year per 100,000 population in the catchment area. Admission rates are useful in that they allow comparisons among geographic areas as well as special population subgroups by adjusting the effects of population size. Admission rates were selected instead of utilization rates because of their greater accuracy.

The statewide admission rate was 869 admissions per 100,000 population. The admission rate ranged from a low of 227 per 100,000 reported by O-P-C to a high of 1,548 per 100,000 population reported by Catawba.

GRAPH 1

This graph reflects the number of persons served by the 29 Area Programs for the time period FY1998 through FY2007. This data reflected in this graph does not include persons on inactive status.

A total of 315,338 clients were served by Area Programs during FY2007 representing a 6 % increase over the 296,724 during FY 1998 .

TABLE II

Table II reflects the number of persons served in each of the Area Programs by age and disability. The age of the client was calculated as of 6-30-07 and the disability of the client was based on the diagnosis assigned to the client on the IPRS/Medicaid paid claim.

A total of 315,338 persons were served in the Area Programs during FY07. The statistic, persons served, is calculated by totaling the active caseload on July 1, of the fiscal year (excluding those clients on Inactive Status) and all admissions.

Of the 315,338 clients served, 76 percent (238,880) were mentally ill, 6 percent (19,123) were developmentally disabled, and 18 percent (57,335) were substance abusers. Within each disability the percent of children served (0-17) ranged from 3 percent (1,975) of substance abusers, to 30 percent (5,753) of the developmentally disabled. The percent of children served in the mental health category was 27 percent (65,598).

TABLE 3

The data reflected in this table included admissions by diagnosis and marital status. The aggregate groupings of diagnosis are based on the ICD9, International Classification of Diseases, 9th Revision Clinical Modification.

Of the diagnosis reported at the time of admission, substance abuse (11,051) accounted for (14.1 %). However, when looking at Psychiatric Diagnosis only, which represented 58.3 % percent of all diagnosis, major depressive disorders (15.1 %) accounted for the most frequent diagnosis. Clients diagnosed with mental retardation accounted for one percent (1.3 %) of all admissions while alcohol abuse accounted for 7.9 %.

In the marital category the largest group are those who are single, representing 64.1 % of all admissions. This is fairly consistent across all regions.

TABLE 3A

The data in this table reflects admission characteristics by race, sex and age categories.

Males represented a majority of the total admissions (52 %) with females representing 48 % of the total admissions.

When looking at race categories during FY07 non-white admissions numbered 29,904 or 38 % of the total reported. Of the non-white admissions reported 1.5 % were American Indian.

The age group composition of area program admissions reflects that 19 % fell within the 25 to 34 age group. When admissions are grouped by the three major age groups, 27.2 % were 0-17, 70.8 % were between 18-64 and 2.1 % were 65 years and older.

TABLE IV

This table includes selected indicators for all terminations while the proceeding four tables focused on admissions. This table was included since diagnostic classification may change during the course of treatment and final diagnosis should be more accurate.

The relationships described for admission diagnosis remained true for termination diagnoses, although absolute numbers and percentages changed. Substance abuse accounted for 12.3 % percent of terminations versus 14.1 % of admissions. Adjustment disorders accounted for 5.2 percent of terminations versus 3.9 percent of admissions while major depression disorders accounted for 17.4 percent versus 15.1 percent at admission.

TABLE V

Table V reflects the unduplicated count of persons served in each of the Area Programs by age and disability. The age of the client was calculated as of 6-30-07 and the disability of the client was based on the diagnosis assigned to the client on the IPRS/Medicaid paid claim.

A total of 311,289 persons were served in the area Programs during FY07. The statistic, persons served, is calculated by totaling the active caseload on July 1, of the fiscal year (excluding those clients on Inactive Status) and all admissions.

TABLE VI

The data reflected in this table included screenings by timeline and after triage.

Of the screenings reported , (42,191) clients were referred for Enhanced Benefits which accounted for 41.9 % of all screenings and Basic Benefits (38,484) which represented 38.3 % of all screenings. For the timeline of the screenings reported (74,219) clients were categorized as Routine which accounted for 73.7 % of all screenings. (13,328) were categorized as Emergent which accounted for 13.2% of all screenings.

Table VII

The data in this tables reflects the drug of choice for all admissions with a substance abuse principle diagnosis.

Alcohol was the drug of choice for (5,371) admissions which represented 30.7% of all substance abuse admissions. Cocaine/Crack was the drug of choice for (3,926) admissions which represented 22.5% of all substance abuse admissions. Marijuana/Hashish (Cannibus) was the drug of choice for (1,978) admissions which represented 11.3% of all substance abuse admissions.
